

Prototype estimated  
Specs- 20' length  
8'5" at widest point  
6'2" height  
800 lb. weight

Note: This craft was designed and built without the aid of modern plans or CAD drawings. If someone with the ability CAD draws plans for this design and offers me the use of them they will be included and credit given.  
Roger Mann

The Islander 20 is designed to be quick, easy and cheap to build. These plans are intended for a person of sufficient skill to work independently, but who may benefit from the experience of the original builder to save time, money and ensure outcome.

All the procedures outlined here are basic and will require a certain amount of skills but none of it is rocket science and anyone should be able to build themselves a good seaworthy vessel at a minimal cost in both time and money.

RagWing Islander Cover Sheet.  
print off this sheet and play around with ideas - Paint, sail/no sail, window locations etc.
